

Vildbjerg Sports- og Kulturcenter

Pools – assurance to both site management and constructors

Both new pool projects and renovation of pools see a current boost throughout Scandinavia these years. Alfix is involved in many of these projects and most recently, Vildbjerg Sports- og Kulturcenter in Herning has been successfully completed.

The site manager states:

"We have experienced an excellent co-operation with Alfix on the Vildbjerg project in terms of replacement of tiles in the pool. Professional focus has been kept and Alfix has been most helpful with technical support and guidance. Given this experience, Alfix is likely to be invited to join future pool projects at an earlier stage – from the time of specification and supervision - in order to benefit from the company's vast pool experience", says Jørgen Hermann Damsbo, constructing architect from ÅF Buildings Denmark.

Responsible constructional advisory before, during and after a building project constitutes the core service which Alfix aims to deliver to each and one of its business partners and, hence, Alfix really appreciates the intention to increase the future involvement of the company, so Carsten Schultz, Head of Technical Advisory Dep. at Alfix.

The operating tiler fixer shares his experience from the same building project:

"The co-operation with Alfix in Vildbjerg has been excellent from start to finish. Speaking as operating tile fixer, it has been crucial to have Alfix along right from the very first construction meeting, and every step of the way the dialogue has been fine. When collaborating with Alfix, a suitable solution is always found due to their solid experience within tile fixing and pools. A fact that safe guards both owner and us, being the contractor", explains Lars Gade, Master builder and co-owner of Børge Lind & Sønner A/S.

A dialogue-based, solution-oriented and trusting co-operation between the various parties forms the foundation for a good and lasting result to everybody's satisfaction. It pleases Carsten Schultz to learn that both contractor and owner felt safe and assured during the whole process as assurance is the number one purpose of the Alfix pool system including technical support.

Similar to other Scandinavian pool projects involving Alfix, the following products have been used for Vildbjerg Sports- og Kulturcenter:

- Alfix PlaneMix S40 – pool and concrete repair mortar
- Alfix 2K Sealing Membrane
- Alfix ProFix – fleksible tile adhesive
- Alfix CeraFill 18 resistant – high-strength grout
- Alfix C2 Epoxy Grout

EM in Budapest - SKILLS

In Denmark the national winner of the Danish Championship in SKILLS, Samuel Birk Axelsen from the company Lund & Staun A/S, prepares for the coming EuroSKILLS for trades.

The young skilled tile fixer also prefers Alfix for his everyday work:
"Alfix offers superb products. When I use Alfix from start to finish – from primer to elastic sealant – I get a result that matches, which is less but perfect".

We really appreciate Samuel's praising words. EM in Skills takes place in Budapest, Hungary from 26. to 28. September 2018, and Samuel participates as national winner from the Danish SKILLS championship in wall and floor tiling.

As main sponsor of the Wall and Floor Tiling trade at DM, EM and VM in SKILLS we look forward to following the young Danish talent seen in all white on the photo. Samuel is here participating in a training camp with other young skilled talents in Copenhagen earlier this summer. Since 2011, Alfix has been main sponsor at the SKILLS competitions.

See this television piece from August about the skilled tile fixer:

Another beautiful home painted with Alfix facade paint!

This exclusive functionalist home has just been painted with white Alfix DuraDec 8000SR, a facade paint based on silicone resin.

The owner requested a durable, maintenance low paint as the existing facade paint failed to meet these requirements. The old facade had soon been attacked by algae growth and dirt.

Alfix DuraDec 8000 SR offers a durable facade with a life of up to 20 years before any retreatment is required. Furthermore, it is extremely resistant to algae and other contamination. The paint is developed and produced at our factory in Kolding. A thoroughly tested Danish product – a perfect match for the constantly changeable Danish climate.

The paint is very diffusion open and available in a broad range of colours.

Would you like to join the club?

Tile fixer's club – Alfix Pro Club now opens for registration to the next arrangement.

Pro Club was successfully launched in May 2018. The club operates as network of professional tile fixers and provides via meetings and ongoing dialogue between Alfix and the members a professional forum for exchange of technical trade know-how in the field of e.g. tile fixing and facades. Submission of news is by mail or within a closed Facebook group – for Pro Club members only.

The next Pro Club meeting held at Alfix in Kolding is now open for registration. The meeting takes place on Friday 2. November 2018, and one of the main themes will be "large-sized tiles" and how to face the obvious challenges of application.

For registration - [press here](#).
